

Keep within reach, keep safe this summer

Even the shallowest of ponds can be lethal. From a child's perspective, a 500mm deep pond is equivalent to an adult falling into 1800mm of water - the child being unable to climb out of the water.

If you are not within arm's reach of your child when they are around water, you have gone too far. Make sure your children are water aware and stay safe this summer.
